Profile

I am a creative gaming and VR developer with a strong background in computer science and digital media. Skilled in building interactive, user-centered digital environments, I specialize in virtual reality and game development using Unity (C#) and 3D modeling within Blender. I focus on delivering impactful, purposeful gameplay experiences and immersive solutions that combine creative mechanics with tech to design engaging interactive worlds.

Education

Bachelor's Degree at Computer Science, Future University in Egypt

Oct 2022 – July 2026

- Major: Digital Media
- GPA: 3.6/4.0

Work Experience

3D and VR Designer Intern

July 2025 – Feb 2026

DEPI (Digital Egypt Pioneers Initiative), eYouth, MCIT, Egypt

- Graduated successfully from the competitive DEPI initiative by pitching and developing the award-winning "My Super Morning VR" game project.
- Designed, optimized, and modeled interactive 3D virtual environments, character assets, and spatial layouts within Blender.
- Applied Unity and the XR Interaction Toolkit workflows to bridge 3D modeling pipelines with functional VR game mechanics.
- Cultivated professional freelancing and business development skills, focusing on project scoping, personal branding, and portfolio building.
- Completed the intensive Business English Track delivered by Berlitz Egypt, sharpening professional communication skills for the global tech landscape.

Technical Developer and Immersive Designer

April 2026

VR Immersion for Interior Design Workshop, Future University in Egypt

- Developed two distinct interactive spatial environments featuring custom animation sequences and real-time lighting paths.
- Mastered cross-engine pipelines importing optimized 3D models from SketchUp/Rhino into Twinmotion for Unreal Engine rendering.

Courses and Certificates

Unity Essentials Badge – Unity

March 2026

- Completed foundational engine pathways to master real-time 3D environment configuration.

Create with VR Course – Unity

April 2026

- Finished the intensive 30-hour certification course building core VR logic.

VR Development Pathway – Unity

April 2026

- Mastered immersive implementation using the XR Interaction Toolkit during the DEPI initiative.

Soft Skills and Languages

- Communication & Presentation Skills
- Problem-solving and analytical thinking
- Adaptability and continuous learning
- Team collaboration and Multitasking
- **Arabic:** Native
- **English:** Fluent
- **French:** Intermediate

Technical Skills

- **Game Engines:** Unity C#, XR Interaction Toolkit, Twinmotion, Meta Quest Hardware Ecosystem
- **3D Design:** Blender (3D Modeling, Texturing, Rigging), 2D/3D Animations, UI/UX , Figma, Canva
- **Programming Languages and Frameworks:** C#, JavaScript, Python, Dart, Flutter, HTML5/CSS3
- **Development Tools and Core Concepts:** Visual Studio, Github, Game Physics Systems, Spatial Level Design.

Projects

- **VRKido – Cognitive Training VR Game Application, Future University**
Description:Developed an immersive virtual reality game application for adhd children. Implemented multiple complete in-game interactive mini-games including 3D puzzle challenges, spot-the-difference mechanics between two images, and a playable 3D Connect Four module .
Tools:Unity, C#, Blender, XR Interaction Toolkit
Link: GitHub Link
- **My Super Morning VR – Interactive Children’s Tour Game, DEPI, E-youth**
Description:Built an experiential virtual reality project serving as an interactive tour environment optimized for children, combining audio-visual assets with real-time navigation .
Tools:Unity, C#, Blender
Link: GitHub Link
- **Mini Kitchen – Serious Game for ADHD Children, DEPI, Cairo ICT**
Description:Programmed a specialized kitchen simulation game targeted directly at supporting children with ADHD, featuring active gameplay loops built around object collecting, dynamic throwing, and organization tasks to train spatial coordination .
Tools: Unity, C#, 3D Asset Optimization
Link: GitHub Link
- **The Journey Home – 3D Endless Runner Game, Future University**
Description: Developed a 3D runner game in Unity featuring random obstacle avoidance and an intelligent, custom-textured NavMesh AI companion trailing the player.
Tools: Unity, C#, NavMesh AI, Asset Optimization
Link: GitHub Link

Achievements

- **3rd Place Winner – DEPI Final VR Game Project (Jan 2026):** Secured 3rd place for "My Super Morning," a VR initiative focused on supporting ADHD children by breaking down daily routines into three interactive gameplay levels.
- **2nd Place Winner – VR Mini-Game Showcase in ICT (Nov 2025):** The game was designed to address a practical need: helping children organize their physical space by engaging them in a VR experience where they pick up objects and throw them into a trash can, complete with a counter to track achievements and progress.

Extracurricular Activities

- Social Media Lead, IEEE FUE Student Branch** Oct 2025 – July 2026
 - Spearheaded content scheduling and designed high-quality branding materials to maximize event participation.
- Social Media Lead, IEEE Women in Engineering – Future University in Egypt** Jan 2025 – July 2026
 - Organized digital media campaign assets and promotional materials for technical workshops and sessions.
